

LocaSpace — Complete Design Overhaul Prompt

Direction: Bold Mediterranean (Deep Blue + Gold + White)

CONTEXT & MISSION

You are redesigning **LocaSpace**, an Angular 20 property rental platform for the Moroccan and Mediterranean market. The current design looks generic and AI-generated (indigo/purple gradients, rounded icon cards, Inter font everywhere). The goal is a complete visual overhaul that feels **premium, distinctive, and authentically Mediterranean** — the kind of design a human designer would produce for a luxury real estate brand.

Do NOT change any logic, routing, services, or Angular component structure. Only modify templates (.html) and styles (.scss/.css).

DESIGN IDENTITY — BOLD MEDITERRANEAN

Concept

Think of the visual language of premium Moroccan riads, luxury coastal villas, and high-end travel magazines. Deep navy authority meets warm gold luxury. Clean white space lets both breathe. This is not a tech startup — this is a trusted, premium space-rental platform.

Mood References

- Luxury boutique hotel branding
 - High-end Moroccan architecture photography spreads
 - Brands like Amanresorts, Maison de la Luz, premium riad websites
 - Editorial feel: confident, spacious, unhurried

DESIGN SYSTEM

1. COLOR PALETTE

Replace ALL existing color variables in `_variables.scss` with:

SCSS

```
// === CORE PALETTE ===
$color-navy: #0A2540; // Deep Mediterranean navy – primary brand
$color-navy-mid: #0F3460; // Mid navy – hover states, sidebar
$color-navy-light: #1A4A7A; // Light navy – borders, dividers on dark
$color-gold: #C9A84C; // Warm antique gold – primary accent
$color-gold-bright: #E8C46A; // Brighter gold – hover/active accents
$color-gold-muted: #8A6F35; // Muted gold – secondary text on dark bg
$color-cream: #FAF7F0; // Warm cream – page background
$color-white: #FFFFFF; // Pure white – card surfaces
$color-sand: #F0E9D6; // Light sand – alt sections, subtle dividers

// === TEXT ===
$color-text-primary: #0A2540; // Navy – headings
$color-text-body: #2C3E50; // Dark slate – body text
$color-text-muted: #6B7C93; // Muted blue-gray – secondary text
$color-text-light: #9AADC2; // Light – hints, placeholders

// === SEMANTIC ===
$color-success: #1A7F5A; // Deep emerald – success
$color-error: #B83232; // Deep red – errors
$color-warning: $color-gold;
$color-info: $color-navy-mid;

// === SURFACES ===
$color-bg-page: $color-cream;
$color-bg-card: $color-white;
$color-bg-nav: $color-navy;
$color-bg-section: $color-sand;
```

CRITICAL — Remove completely:

- All #4F46E5, #4338CA, #EEF2FF (indigo palette)
- All #1E1B4B (deep indigo sidebar)
- Replace #F59E0B amber with \$color-gold

2. TYPOGRAPHY

Replace ALL font imports and variables:

SCSS

```
// Google Fonts import (add to styles.scss top):
@import url('https://fonts.googleapis.com/css2?family=Cormorant+Garamond:ital,wght@0,400,700&family=DM+Sans:ital,wght@0,400,700&family=DM+Mono:ital,wght@0,400,700');

// Font variables:
$font-display: 'Cormorant Garamond', Georgia, serif; // Hero titles, section headings
$font-body: 'DM Sans', sans-serif; // All body text, UI labels,
$font-mono: 'DM Mono', monospace; // Prices, stats, numbers, code

// Scale (keep same size values, change weights and families):
$text-hero: clamp(42px, 6vw, 72px); font: 700 $font-display
$text-4xl: 36px; font: 600 $font-display
$text-2xl: 24px; font: 600 $font-display
$text-xl: 20px; font: 500 $font-body
$text-lg: 18px; font: 500 $font-body
$text-base: 16px; font: 400 $font-body
$text-sm: 14px; font: 400 $font-body
$text-xs: 12px; font: 500 $font-body // uppercase tracking for labels
```

RULE: All page titles, section headings, hero text, property names → Cormorant Garamond. All navigation, buttons, body text, form labels → DM Sans. All prices, stats, numbers → DM Mono.

3. SPACING & SHAPE

```
SCSS

// Border radius — IMPORTANT: reduce all rounded corners significantly
$radius-sm: 2px; // Tags, chips, small badges
$radius-md: 4px; // Buttons, inputs, small cards
$radius-lg: 8px; // Cards, modals, panels
$radius-xl: 12px; // Large cards, image containers
$radius-pill: 100px; // Only for pill-shaped elements

// Shadows — Replace all soft shadows with precise directional ones
$shadow-card: 0 1px 3px rgba(10,37,64,0.08), 0 4px 16px rgba(10,37,64,0.06);
$shadow-hover: 0 4px 12px rgba(10,37,64,0.14), 0 8px 32px rgba(10,37,64,0.10);
$shadow-nav: 0 2px 8px rgba(10,37,64,0.20);
$shadow-modal: 0 8px 40px rgba(10,37,64,0.22);

// Border
$border-default: 1px solid rgba(10,37,64,0.10);
$border-strong: 1px solid rgba(10,37,64,0.22);
$border-gold: 1px solid rgba(201,168,76,0.40);
```

Replace Font Awesome usage with Phosphor Icons (more refined, better weight options):

html

```
<!-- Add to index.html -->  
<script src="https://unpkg.com/@phosphor-icons/web"></script>
```

Icon mapping (replace existing FA icons):

fa-building	→	ph-buildings
fa-users	→	ph-users-three
fa-map-marker	→	ph-map-pin
fa-calendar-alt	→	ph-calendar-blank
fa-eye	→	ph-eye
fa-heart	→	ph-heart
fa-search	→	ph-magnifying-glass
fa-star	→	ph-star
fa-home	→	ph-house
fa-plus	→	ph-plus
fa-edit	→	ph-pencil-simple
fa-trash	→	ph-trash
fa-check	→	ph-check
fa-times	→	ph-x
fa-bell	→	ph-bell
fa-user	→	ph-user
fa-euro	→	ph-currency-eur
fa-chart	→	ph-chart-bar
fa-arrow-right	→	ph-arrow-right
fa-logout	→	ph-sign-out

Icon rendering rules:

- Default weight: **regular** (stroke, not filled)
- Active/selected states only: **bold** weight
- Size: 20px inline, 24px in cards, 32px in empty states
- NEVER use colored square/rounded backgrounds behind icons
- Icons should appear directly, colored with text or gold

PAGE-BY-PAGE REDESIGN INSTRUCTIONS

Hero Section

- **Background:** Full-viewport image using Unsplash URL:

WHAT TO ABSOLUTELY AVOID

1. ❌ Any shade of purple or indigo ((#4F46E5), (#6366f1), (#8b5cf6), (#1E1B4B))

2. ❌ Colored square/rounded backgrounds behind icons (orange square, green square, blue square)
 3. ❌ Purple/indigo gradient headers or hero sections
 4. ❌ `Inter` or `Plus Jakarta Sans` for headings
 5. ❌ `border-radius` larger than `12px` on cards
 6. ❌ Soft pastel shadows (`rgba(99,102,241,...)`)
 7. ❌ Flat colored stats boxes with no visual hierarchy
 8. ❌ Emoji as category icons

FINAL CHECKLIST FOR ANTIGRAVITY

Before finishing, verify:

- ☐ Zero purple or indigo colors remain anywhere
- ☐ All page title headings use `Cormorant Garamond`
- ☐ All KPI numbers and prices use `DM Mono`
- ☐ No icon has a colored square/rounded background
- ☐ Sidebar background is `$color-navy` ( `#0A2540`)
- ☐ Primary CTA buttons are navy or gold (never purple)
- ☐ All cards have `border-radius` $\leq 12\text{px}$
- ☐ Angular Material overrides are applied globally
- ☐ Unsplash images are in place for hero and placeholder cards
- ☐ Status badges use the new semantic colors (gold/navy/error/success)
